I. INTRODUCTION

The main purpose of this project is to sell items. We sell Covid supplies commercially. The project is probably the number one thing people need currently. People need masks, sanitizer, clean wipes, and vaccines for the future. Since there are many real vaccines in development around the world. We will offer free shipping for the vaccines when they come out. Everyone in this world, be it a man or a dog can be prone to Covid can benefit from the project.

II. WORK COMPLETED

1. We have completed almost all the front end side. Rob had an emergency and had to go home so the project was halted for a bit. We are working on the database side. We still need to work more on HTML and CSS.

III. WORK TO DO

We must finish the back-end side of the project mainly the database. It is very confusing at first, but we are picking up the pace. We are also aware of the incomplete front end side and hopefully we can complete before the break.

IV. WHAT IS GOING WELL

The first thing to note is our team communication. We do zoom every week and stay up to date on snapchat group chat. We also have healthy communication and

relation with one another, and we are happy that we are working together.

V. CHALLENGES AND POTENTIAL RESOLUTION

The main challenge is the deadline. We have so many things going on but also, we are stuck home all day. The main thing is the motivation to do work. We have become too lazy this semester to be honest. We need to work on ourselves and start finishing the project already.

VI. SHORT REFLECTIONS

Sachin:

What I enjoy: I enjoy learning new things and this project helps me learn new things online and put it on my project. I also like to use my creativity to do this project. I like freedom basically and the team members.

What I do not enjoy: I do not like the database part. I really enjoy coding HTML and CSS, but the database side is a lot. Besides this, I enjoy everything.

Rob:

The main thing I enjoy about the project is knowing what needs to be done and how it should be done. Everything is straight forward but, the complications of communication are the only setbacks.

Alex:

I have really been enjoying the database side of things. I like being able to focus on the connections between data and making sure everything interacts smoothly. What I do not like as much is working with HTML and CSS. This project has been very challenging and very rewarding, letting us use our creativity and the skills we have learned throughout our computer science careers.

VII. CONCLUSION

We are on track to complete our project and are happy with what we have so far. We have made lots of progress and overcome many challenges, but there is a lot of work left to do.
